

Xentric® Data (Xetra)

Professional management of the data streams between Xetra® and the in-house system

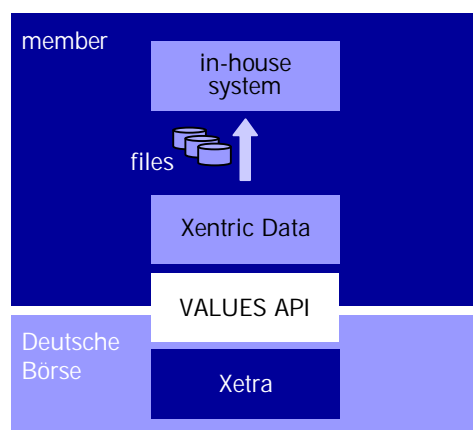

simple conversion of Xetra data streams

Xentric Data offers the efficient connection of exchange participants' in-house systems to Xetra and therefore enables the development of new applications for the evaluation and further processing of the delivered data. The data is provided in a "readable" format.

The key functions are thus the safe and complete reception of data on orders, executions and trades of a participant and its customers as well as the independent management of data feeds.

Data feeds both "public" and "private" are processed.

system architecture with Xentric Data

additional products for Xentric Data

Xentric Data MQSeries-Adapter: The received data can be transferred directly across all platforms via IBM WebSphere MQ.

Xentric Data Realtime: Realtime processing of data is guaranteed by synchronously transmitting the data streams directly into the participant's in-house application.

Benefits for our customers.

- n Cost efficiency: A cost intensive VALUES API programming does not apply.
- n Readability: Provision of data in txt format with fixed sentence length.
- n Completeness: Complete reception is ensured due to the automatic request of missing data.
- n Security: Automatic re-establishment of the connection in case of interruption or failure.
- n Protocol function: Documentation of data stream files and log files.
- n Service: Support and maintenance.

Compatible operating systems:

- n Microsoft Windows
- n Sun Solaris

Connection possibilities:

- n Batch connection: a one-time data query at the end of the trading day
- n Online connection: constant data query, e.g. for a risk management system.
