

Xentric® Trade Machine

THE low-latency software-solution for Algorithmic Trading and Quoting

strategies
realize quickly

The Xentric Trade Machine supports innovative trader to achieve competition advantages through automated trading. It is the ideal software application for Xetra Designated Sponsors for rule-conform and rating-optimized quoting and even for Xetra or Eurex trader.

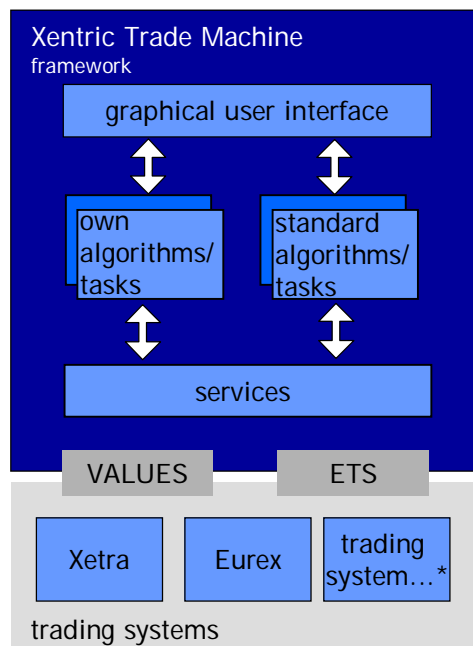

Trading members use the flexible Java-based framework to implement successful their complex trading strategies through self-programmed algorithms.

Trader without programming skills choose the "out of the box"-utilization of pre-fabricated algorithms (standard tasks). In this case they can control their functional job over their own parameters via graphical user interface.

Key Benefits

- n Flexible framework: pool of services to connect trading systems, to receive reference market-, trading- or master data
- n Low latency: high performance and scalable client-server-architecture
- n Individuality: free programmability and real-time simulation of algorithms
- n Reliable market estimation: integrated algorithm for the calculation of fair market prices
- n Multi-user-ability: allocation of rights based on a role concept
- n Security: hot failover-mechanism
- n Practical approved: placement from 80% of all quotes in Scoach

system
architecture

Key facts

- n Reference markets: Xetra, Reuters, Universal (e.g. excel sheet, own data sources)
- n Manual frontend to enter/delete order/quote
- n Position and performance indication
- n Time-based parametrization of algorithms
- n Individual structuring of parameter group indications
- n Extensibility of parameters over XML-based configuration files
