

ExServes[®] Management Link

Cost efficient connection between your trading engines
via Deutsche Börse Systems network.

With the ExServes Management Link, Deutsche Börse Systems provides a line connection between your office and the Proximity Housing location (co-location).

As long there is sufficient capacity, no additional lines are required. The lines are monitored and managed by the Network Operations Team of Deutsche Börse Systems.

A further advantage of this connection type is that all traffic is routed across the existing Deutsche Börse Systems private IP network and does not traverse the public Internet.

ExServes Management Link offers ...

- n Continuous monitoring of lines during trading hours.
- n Immediate and automatic notification in case of network problems.
- n Automatic initiation of corrective actions.
- n High availability according to Deutsche Börse Systems standard.
- n Single connection or redundant architecture.

... and these are your advantages:

- n Cost efficient connection between your trading engines in your offices and Frankfurt/Main, Germany via Deutsche Börse Systems network.
- n Measurement and analysis of utilisation of network components included.
- n Prompt information to customer in case of potential infrastructure limitations.

Further products:

ExServes Connect – Full service package that offers a fast and easy access to Deutsche Börse Group's trading systems.

ExServes RSM Professional – Continuous, pro-active supervision and maintenance of your trading systems including automatic error handling as well as installation of all releases and updates of your operating and front end software.
