

## Xentric® Data (Xetra)

# Professional management of the data streams between Xetra® and the in-house system

### Simple conversion of Xetra data streams

Xentric Data offers the efficient connection of exchange participants' in-house systems to Xetra and therefore enables the development of new applications for the evaluation and further processing of the delivered data. The data is provided in a "readable" format.

The key functions are thus the safe and complete reception of data on orders, executions and trades of a participant and its customers as well as the independent management of data feeds. Data feeds both "public" and "private" are processed.

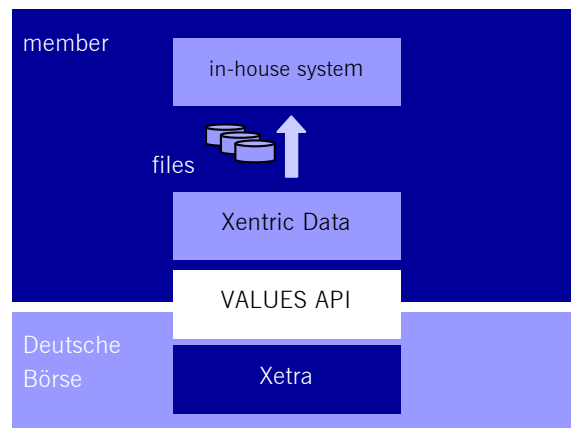

#### Connection possibilities:

- Batch connection: a one-time data query at the end of the trading day
- Online connection: constant data query, e.g. for a risk management system

#### Benefits:

- **Cost efficiency:** A cost intensive VALUES API programming does not apply.
- **Readability:** Provision of data in txt format with fixed sentence length
- **Completeness:** Complete reception is ensured due to the automatic request of missing data
- **Security:** Automatic re-establishment of the connection in case of interruption or failure
- **Protocol function:** Documentation of data stream files and log files
- **Service:** Support and maintenance

### System architecture

#### Compatible operating systems:

- Microsoft Windows
- Sun Solaris

#### Additional products for Xentric Data

- **Xentric Data MQSeries-Adapter:** The received data can be transferred directly across all platforms via IBM WebSphere MQ.
- **Xentric Data Realtime:** Realtime processing of data is guaranteed by synchronously transmitting the data streams directly into the participant's in-house application.
