

Xentric® FIX Gateway (Xetra)

Efficient connection via FIX to Deutsche Börse Group's trading system Xetra

Secure and fast connection via FIX

The Xentric Fix Gateway allows an efficient and fast connection of participant's FIX-based applications to the VALUES API-based trading system Xetra.

The Xentric FIX Gateway consists of a FIX Engine and the Exchange Adapter. The FIX Engine secures the communication between the connected partners and is responsible for the administrative aspects of the FIX protocol.

The mapping of inbound and outbound FIX messages with the VALUES API is conducted by the Exchange Adapter. It constitutes the connection to the trading system and converts the messages from the trading system format into FIX and vice versa.

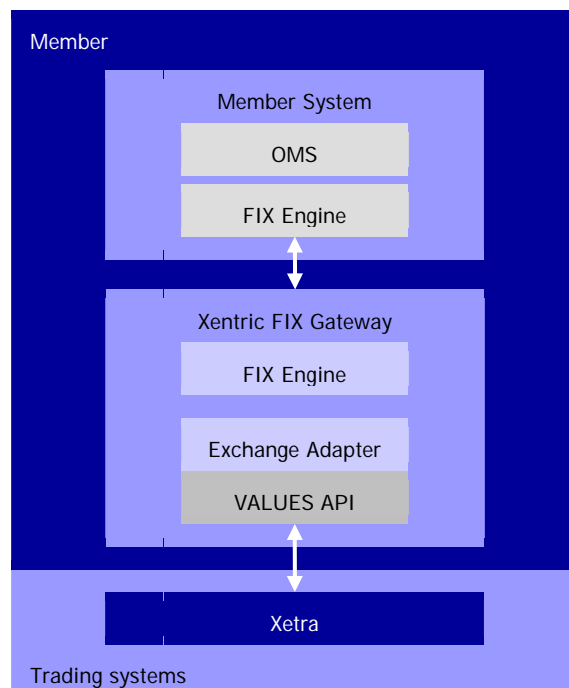

The Xentric FIX Gateway allows the exchange participants:

- n to enter, modify or delete an order
- n to receive order status messages
- n to receive execution reports.

Benefits:

- n **Cost efficiency:** A cost intensive VALUES API programming does not apply
- n **Future reliability:** VALUES API adjustments in case of trading system releases are not necessary
- n **Service:** Support and maintenance

System architecture

Technical specifications:

- n **Operating system:** Microsoft Windows or Sun Solaris
- n **FIX-Format:** 4.2
- n **FIX Engine:** Open Source FIX Engine QuickFIX® von ThoughtWorks Inc.
