

ExServes Management Link

Cost efficient connection between your trading engines via Deutsche Börse AG networks

With ExServes® Management Link, Deutsche Börse AG provides leased line connectivity between your premises and Proximity Frankfurt or with another location in reach of the Xetra®/Eurex® trading network.

Often, existing physical lines can be used leading to attractive pricing and short realisation times. The lines are monitored and managed by the Network Operations Team of Deutsche Börse AG.

A further advantage of this connection type is that all traffic is routed across the existing Deutsche Börse AG private IP network and does not traverse the public Internet.

ExServes Management Link offers you:

- n Continuous monitoring of lines during trading hours
- n Immediate and automatic notification in case of network problems
- n Automatic initiation of corrective actions
- n High availability according to Deutsche Börse AG standard
- n Single connection or redundant architecture

These are your advantages:

- n Cost efficient connection between two of your locations, e.g. your main premises and Frankfurt Proximity via Deutsche Börse AG network
- n Measurement and analysis of utilisation of network components included
- n Prompt information to customer in case of potential infrastructure limitations

Further products:

ExServes Proximity Services – lowest possible latency times due to physical proximity

ExServes Connect – Full service package that offers fast and easy access to Deutsche Börse Group's trading systems

ExServes RSM Professional – Continuous, proactive supervision and maintenance of your trading systems including automatic error handling as well as installation of all releases and updates of your operating system and front end software

ExServes Router Management – continuous, proactive monitoring and maintenance of your router infrastructure
