C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Deutsche Börse Group is one of the world’s largest exchange organisations. We organise markets characterised by integrity, transparency and safety for investors who invest capital and for companies that raise capital. Our product and service portfolio covers the entire process chain from the monitored execution of trading orders, clearing, netting and transaction settlement through to post-trade custody of securities as well as liquidity management. This portfolio is rounded off by the necessary electronic infrastructure and the provision of market information. Deutsche Börse sets standards with its superior risk management and its innovative collateral management to enable customers to effectively use their capital. Our clear vision is to turn Deutsche Börse Group into the global market infrastructure provider of choice, being top-ranked in all its activities. We operate to the most exacting standards to create products and services to meet the needs of international financial markets. As a listed company we work to create value for our customers and our shareholders. Europe is the core area of the Group’s business and it is continuously increasing its global reach, particularly in the US and Asia. The range of our offerings is constantly broadened by new products in existing and new asset classes, e.g. foreign exchange. Deutsche Börse has been a listed company since February 2001. As an issuer, it competes for investors’ capital on the capital market. At the same time, Deutsche Börse AG’s membership in the DAX® – since December 2002 – has increased its visibility on the international capital markets, thus strengthening its competitive position.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data.

Operational control

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?

Yes
(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Position of individual(s)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chief Operating Officer (COO)</td>
<td>Sustainability aspects - which include climate-related issues - are implemented alongside the whole value chain of Deutsche Börse Group, depending on the business area or business model affected. In 2018, the COO chaired the Group Sustainability Board (GSB), which ensures an overview of all sustainability-related topics, including climate-related issues. The Board consists of 12 members, two from each area of Executive Board responsibility and the Head of Group Sustainability. In his role as chairman of the Group Sustainability Board the COO has various climate-related tasks and responsibilities. For example the COO has the final responsibility for the further development of the Group-wide sustainability strategy along the entire value chain and the advice of the Executive Board on sustainability related issues. Moreover he (together with the other GSB members) reviews current ESG KPI's and develops further targets.</td>
</tr>
<tr>
<td>Chief Executive Officer (CEO)</td>
<td>The CEO oversees the overall strategy of the Group and therefore also the Group's sustainability strategy (which also includes the climate strategy). The Group-wide sustainability management (the Unit Group Sustainability) is assigned to his area of responsibility.</td>
</tr>
<tr>
<td>Chief Financial Officer (CFO)</td>
<td>Besides chairing the Group Sustainability Board in 2019, the CFO is responsible for the annual report as well as risks. Integral part of the annual report is the integrated sustainability report (non-financial declaration). We want to lead by example and offer our stakeholders information which is relevant to them. Deutsche Börse is further enhancing the quality of its sustainability reporting in the 2018 annual report by integrating key information into the Group’s combined management report as well as by adhering to the concept of firmly embedding social responsibility and sustainability in all business areas. Climate related risks are regularly reviewed and evaluated by the Group Risk Committee and the Supervisory Board Risk Committee. Specific risk related topics are prepared and discussed in due time and close cooperation.</td>
</tr>
</tbody>
</table>

(C1.1b) Provide further details on the board’s oversight of climate-related issues.

<table>
<thead>
<tr>

(C1.2a)
Since the financial crisis of 2007/2008 the importance of ESG (Environmental, Social, Governance) information as part of the comprehensive assessment of the medium to long-term forecast of a company’s success has been steadily increasing. Investors, customers, analysts and not least the regulators are increasingly calling on companies to disclose core business-related opportunities and risks in the ESG area alongside the conventional financial indicators.

To meet these increased expectations, counter potential risks early on but also identify future business areas, Deutsche Börse Group established a Sustainability Committee - the Group Sustainability Board (GSB) in July 2016. The GSB is the key decision-making body for sustainability issues, including climate change. The board, currently numbering 14, has two members from each Executive Board area plus the Head of Group Sustainability (Chief Sustainability Officer). Its tasks are to develop the Group-wide sustainability strategy and to advise the Executive Board of Deutsche Börse AG on sustainability issues. Cross-divisional issues such as climate change, other ESG issues and their reporting are discussed, and the results and identification of the associated opportunities and risks are reported to the Executive Board bi-annually. This way, the Executive Board keeps an eye on the impact of Deutsche Börse Group's corporate activity along the entire value chain. In addition, it seeks to strengthen awareness of the importance of medium and long-term opportunities and risks of business activities in connection with climate change across the entire group of companies. Based on the analyses and discussions of the GSB, it makes the final decisions and formulates the Group-wide approach to sustainability issues. The CEO oversees the overall strategy of the Group and therefore also the Group's sustainability strategy (which also includes the climate strategy). After each meeting of the Group Sustainability Board, there is a slot in the Executive Committee for sustainability-related topics, which of course include climate issues.

The Head of Group Organisational Services, which includes the Facility Management and Purchasing department, is also member of the Group Sustainability Board and oversees and monitors the environmental performance of our business operations.

The Chief Sustainability Officer, who leads the Group Sustainability department, is - together with its team - responsible for the strategic analysis of climate-related challenges and global trends and prepares the meetings of the GSB. She compiles specific sustainability-related information for the individual business areas, anchors sustainability in the core business and is engaged in a regular exchange with a large number of internal and external stakeholders.

Alongside the GSB, the Group-wide recording and monitoring of risks by Group Risk Management (GRM) is another key element to identify and disclose ESG risks in the business model and corporate strategy of Deutsche Börse Group. The individual business areas thus also establish climate-related risks and report them to GRM on a regular basis or, in urgent cases, immediately. The GRM evaluates the risk potential under the leadership of the Chief Risk Officer and decides how it should be managed by the business areas. The Chief Risk Officer, who is the highest ranking person with dedicated risk management responsibility on an operational level, reports directly to the CFO and has regular status Meetings. In turn, GRM reports to the responsible Executive Board members and bodies.

With the help of the information from GRM and Group Sustainability, the Group Risk Committee (GRC) reviews the Group's climate-related risk exposures. The GRC is an internal risk committee at management level. It is headed by the Chief Financial Officer and is positioned at the interface between GRM and the Executive Board or Supervisory Board of Deutsche Börse AG and the relevant board committees. At EEX the Chief Executive Officer - together with other board members - is managing EEX's business strategy where possible climate-related risks and opportunities are part of. The strategy is reviewed at least once a year and climate-related issues are monitored this way.

Moreover, the Risk Committee of the Supervisory Board monitors the risk management system and its continuing improvement in light of the risk strategy and the Supervisory Board of Deutsche Börse AG monitors the effectiveness of the risk management system as a whole and evaluates the overall risk strategy and risk management system.

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?  
Yes
(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).

Who is entitled to benefit from these incentives?
Facilities manager

Types of incentives
Monetary reward

Activity incentivized
Efficiency target

Comment
One of the core responsibilities of our facility management department is to plan, optimise, monitor and control capacity related purchases, system utilisation and efficient usage of resources. The overall efficiency targets are hence related to the performance of the overall department rather than the goals of a single person. Nevertheless employees are rewarded with a yearly bonus if they perform very well in their respective jobs.

Who is entitled to benefit from these incentives?
Corporate executive team

Types of incentives
Monetary reward

Activity incentivized
Other, please specify (Product Development Target)

Comment
Deutsche Börse Group holds a majority share in European Energy Exchange AG (EEX), Leipzig, Germany. The product and service offerings of EEX and its subsidiaries focus on energy and energy-related markets (e.g. power, gas, emission allowances). By providing liquid, secure and transparent markets, EEX group plays an important role for improving the efficient functioning of these markets that are directly linked to questions of climate change. This includes the continuous development of new products and services, providing market solutions to support the long-term transition of Germany's and Europe's energy system towards a higher share of carbon-free, renewable energy sources. EEX is constantly developing new support within the framework of the German "Energiewende" and wider EU climate and energy policy. This includes the long-term 2030 and 2050 climate and energy policy targets. Beside power markets, EEX operates a regulated market for emissions allowances and hosts the central auction platform for the EU ETS, organizing regular auctions on behalf of 27 EU Member States including 25 countries which form a EU-wide auction platform to be coordinated by the European Commission as well as Germany and Poland. Furthermore, it provides an exchange-traded market in Guarantees of Origin (GoOs) for electricity from renewable energy sources and is developing new hedging instruments to address the effects of increasing power generation from renewables. The executive team of EEX and the heads of unit are rewarded based on the successful introduction of new products and services and increase of market shares in existing products and services as well as broadening the membership base, thereby generating business solutions closely tied to climate change issues. In the on-going transition to an energy system with a higher share of renewables, EEX is taking an active role by introducing new products to support this process, and adapting existing products. One example for the latter is the introduction of shorter lead times for power trading, thereby supporting the integration of renewable energy. Through extending its membership base, EEX is actively supporting new players in the power market, which is a core requirement for an efficient transition of the energy system.

Who is entitled to benefit from these incentives?
Environment/Sustainability manager

Types of incentives
Monetary reward

Activity incentivized
Behavior change related indicator

Comment
Individual goals of the sustainability team are related to communicating climate change issues internally and externally. Reaching those goals is incentivised through bonus payments.

Who is entitled to benefit from these incentives?
All employees

Types of incentives
Other non-monetary reward

Activity incentivized
Behavior change related indicator

Comment
All staff in Germany is provided the opportunity to receive a job ticket to incentivise the reduction of the employees CO2 footprint.

(C2.2b)
Deutsche Börse is convinced that climate change will have a material impact on the economy as a whole and thus also on Deutsche Börse Group. Already, acute and chronic physical risks resulting from climate change can be observed, which are affecting the company and its stakeholders alike. Our risk management approach comprises transition risks (policy and legal, technology, market, reputation) and opportunities (e.g. products/services, markets, resilience), as well as physical risks in relation to climate change.

Each business area is responsible for identifying risks and reporting them promptly to the risk management team. Thus the central risk management function is notified when climate-related risks are identified. Climate-related risks are part of the overall Risk Management Framework and are considered in the Operational Risk and Business Risk Profile of Deutsche Börse Group, which represents the adverse impact on the Group's every day operation and planned EBITDA, respectively. Together with the stakeholders within the company, the risk management function quantifies and assesses those risks. The Chief Risk Officer will be involved when important matters arise. Risks are monitored and reported to the Group Risk Committee and to the Risk Committee of the Supervisory Board of Deutsche Börse Group on a regular basis. Those committees decide upon mitigating measures and controls that are to be implemented.

On a short-term horizon (12 months), an annual review of both risk types is conducted and risks are assessed in terms of probability and severity. In both cases, climate-related risks then enter a simulation together with other risks. For Operational Risks, Deutsche Börse Group performs a Value at Risk calculation and holds Equity at a confidence level of 99.98%. For a medium-term horizon of 5 years, Deutsche Börse has established so-called Risk Maps that also consider climate-related risks. Those are presented to the Risk Committee of the Executive and Supervisory Board and reviewed by the business owners before each meeting. All new and existing risks are assessed and reported on a quarterly basis (ad-hoc when necessary) to the Executive Board of DBAG. Furthermore, stakeholder engagement is an essential part of the risk assessment process, especially as regulatory risks are concerned.

Deutsche Börse Group attaches great importance to climate change within the overall operational strategy. Based on this premise, Theodor Weimer, Chief Executive Officer of Deutsche Börse AG, 2018 commissioned the GSB with the development and publication of a climate strategy for Deutsche Börse Group. The established Climate Strategy Task Force consists of members of the GSB and identified and discussed climate-related opportunities and risks along the value chain. The processes used to identify, evaluate and manage climate-related opportunities and risks are solution-oriented. It is our constant ambition to understand the relationship between the environment and society, between climate change and the financial market and thus also the possibilities of shaping these relationships on a sustained basis. Environmental problems are also always societal problems. As part of society, as an organiser of international capital markets and as a listed company, the Group seeks not only to limit the impact of climate change on itself but also to provide support when it comes to tackling the problems and challenges on the way to sustainable finance and a sustainable global economy.

Furthermore, Deutsche Börse closely cooperates with ESG rating agencies to assess the materiality of climate related physical and transition risks to its business model and is part of various initiatives and working groups that deal with the development of sustainable finance regulation and the development of suitable models to assess climate-related risks and opportunities. Stakeholder engagement is another essential part of the risk assessment process, especially as regulatory risks are concerned. Deutsche Börse Group is engaged in a continuous exchange with internal and external stakeholders on sustainability, climate action and sustainable finance. Market risks associated with the cost of energy are monitored by our Facility Management Department.

Within these processes the derived maximum impact of a specific risk or opportunity equal to or greater than EUR 5m is classified as a “substantive financial impact”.

</table>

- **Current regulation**: Considered in risk assessments for Operational Risk by covering all potential fines and adverse consequences of current regulation. Deutsche Börse considers financial disclosure regulations affecting their listed companies, e.g. the EU Directive 2014/95/EU on the disclosure of non-financial and diversity information (NFR Directive). Increased regulatory focus on climate change can lead to enhanced disclosure requirements. Another example from the EEX is, against the background of the European policy targets for becoming more energy efficient, increasing renewable energies and reducing CO2 emissions as well as the German “Energiewende” particularly the national implementation of the Clean Energy Package. Also the pricing of CO2 emissions via the ETS or taxes and the scope of the ETS are being considered. The regulatory outcome of all these debates would directly impact EEX Group’s core activities, including clearing and settlement of all transactions.

- **Emerging regulation**: Emerging regulation is part of the Business Risk assessment and considers all regulation which may adversely impact planned EBITDA. Deutsche Börse routinely identifies and assesses risks from emerging regulation risks through its Group Regulatory Strategy Department. Group Sustainability Department is part of, with ongoing monitoring of regulatory developments coordinated through experts. Moreover, there exists a regulatory risk map, with which the emerging regulation is monitored. For example, in the EU the European Commission Action Plan recommended a series of regulatory responses (that were partly already adopted) within the EU in response to growing climate risks. Possible consequences are analysed and respectively prepared for implementation. Another example from the EEX is, against the background of the European policy targets for becoming more energy efficient, increasing renewable energies and reducing CO2 emissions as well as the German “Energiewende” particularly the national implementation of the Clean Energy Package. Also the pricing of CO2 emissions via the ETS or taxes and the scope of the ETS are being considered. The regulatory outcome of all these debates would directly impact EEX Group’s core activities, including clearing and settlement of all transactions.

- **Technology**: Deutsche Börse considers all technology risks which could adversely affect its business continuity. New technologies could lead to new products with respective risks etc. Thus, for the energy and commodity exchanges within Deutsche Börse Group, risks related to climate-related technology is a vital part of the long-term business risk. Deutsche Börse evaluates the impact of such technological shifts when relevant, notably through scenario analysis efforts.

- **Legal**: Adverse outcomes of legal disputes are part of the Operational Risk Framework, which also accounts for climate-related risks. We estimate that litigation risks associated with climate-related issues in Deutsche Börse Group’s disclosures are limited, however incorporate these risks in our assessment. This particularly applies to the Energy Exchanges of Deutsche Börse Group. Possible consequences are analysed and respectively prepared for implementation.

- **Market**: Deutsche Börse has very little market risk exposure that is not secured. The net market risk exposure of Deutsche Börse amounts only to 0.3% of the overall risk profile. Climate-related risks within this risk class are not considered to be worth mentioning.

- **Reputation**: Reputation is one of Deutsche Börse Group’s most valuable assets, key to the success of an international exchange organisation and innovative market infrastructure provider and to its brand. The firm’s Code of Business Conduct highlights the vital importance of protecting and advancing the Group’s Reputation. Climate change contains various reputational risks if not properly addressed, e.g. through negative stakeholder perceptions. Thus, Deutsche Börse Group’s approach to climate change directly affects whether or not Deutsche Börse is listed in indices and ratings related to ESG topics, how the company is viewed by rating & research agencies general, and whether Deutsche Börse remains a credible investment for its investors. That’s why the Group Sustainability department regularly reviews stakeholder perceptions and concerns about these areas, including clients-related topics. We engage with a wide range of identified Stakeholder Groups and many significant external organizations via a range of means of exchange, (incl. significant meetings such as Deutsche Börse Groups AGM at which topics like climate Change were addressed). In 2018 we conducted a quantitative stakeholder survey (our materiality analysis).

- **Acute physical**: Deutsche Börse has offices and data centres located around the world, and we assess risks and opportunities at the facility level to understand climate-related risks including flooding, long-term temperature changes and extreme weather events. We assess our facilities ability to operate, staff access, safety and wellbeing and insurance premium impacts on both a short and long-term basis. We recognise that an effective monitoring and assessment programme must consider both the global perspective and specific local needs. Acute physical climate risks adversely affecting Deutsche Börse’s business continuity and technological infrastructure (e.g. through floods) are considered in all of our climate-related risk assessments. Damage to physical assets is a risk class within OpRisk and explicitly include climate-related damages like flood damage, lightning strikes etc. – Please refer for further details to C2.3a – Risk 3 (impact up to EUR 10m).

- **Chronic physical**: Deutsche Börse has offices and data centres located around the world, and we assess risks and opportunities at the facility level to understand climate-related risks including flooding, long-term temperature changes and extreme weather events. We assess our facilities ability to operate, staff access, safety and wellbeing and insurance premium impacts on both a short and long-term basis. We recognise that an effective monitoring and assessment programme must consider both the global perspective and specific local needs. As buildings and other physical assets are not located in areas where economic deterioration would have significant effects (e.g. sea level), chronic physical risks are not relevant.

- **Upstream**: Upstream risks are defined as climate-related risks embedded in Deutsche Börse’s supply chain operations. Regulatory, legal, reputational, and physical risks are which are included in the Group’s ongoing risk assessments with mitigating policy decisions taken at the senior committee level. Being active in the energy and commodity market, upstream and downstream climate-related risks are part of the business and risks are considered.

- **Downstream**: Deutsche Börse is exposed to downstream risks through stakeholder perception/reputational risks of Deutsche Börse’s responsible management of climate-related issues. Reputation is one of our most valuable assets, key to our success. The firm’s Code of Business Conduct highlights the importance of protecting and advancing Deutsche Börse Group’s reputation and also makes explicit reference to Deutsche Börse Group’s’ environmental commitment. Climate change involves certain reputational risks if not properly addressed. For example through negative stakeholder perceptions. More specific, Deutsche Börse’s approach to climate change directly affects whether or not the Group is listed in indices and ratings related to ESG topics, how the firm is viewed by rating & research agencies general, and whether Deutsche Börse remains a credible investment. Our approach to sustainability is guided by our understanding of the expectations and concerns of our diverse stakeholders (investors, shareholders, NGOs). This requires regular and multi-faceted interactions with stakeholders via a range of means of exchange, (incl. significant meetings such as AGM at which topics like climate change are addressed). Being active in the energy and commodity market, upstream and downstream climate related risks are also part of the business and risks are considered. This comprises “Current regulation” and “Emerging regulation” (please see above for details).
(C2.2d) Describe your process(es) for managing climate-related risks and opportunities.

The assessment of climate risk is embedded in the overall risk management approach. Risk management is an integral component of management and control within the Group and aims at safeguarding the Group’s continued existence and at achieving its long-term corporate goals. The central risk management function collects, reviews and reports all risk exposures of the Group. The risks are quantified, aggregated, and made transparent to management, top-management and supervisory board. The Group-wide risk strategy and risk management concept defines roles, processes and responsibilities and is binding for all staff and organisational entities within the Group. At the same time, an opportunity management is implemented to identify, evaluate and assess opportunities and to transform them into business solutions. The Group ensures that appropriate measures are taken to avoid, mitigate and transfer, or intentionally accept such risks. The trade-off between risk and opportunity is made transparent to provide the best foundation for decision-making, as well as for the implementation of mitigating measures and controls. The principles apply to all business segments.

Deutsche Börse has offices and data centres located around the world, and we assess risks and opportunities at the facility level to understand climate related risks including flooding, long-term temperature changes and extreme weather events. More frequent extreme weather conditions (Typhoons, Hurricanes) may have an adverse impact on Deutsche Börse’s locations. This may increase the need for higher insurance coverage and lead to increased costs for Deutsche Börse. We assess our facilities ability to operate, staff access, safety and wellbeing and insurance premium impacts on both a short and long-term basis. Acute physical climate risks adversely affecting Deutsche Börse’s business continuity and technological infrastructure (e.g. through floods) are considered in all of our climate-related risk assessments. As a result, Deutsche Börse Group has set up a system of emergency and disaster plans covering the entire Group (business continuity management, BCM). This covers all processes designed to ensure continuity of operations in the event of a crisis and significantly reduces availability risk. The Group has introduced and tested a management process for emergencies and crises that enables it to respond quickly and in a coordinated manner. All business segments have appointed emergency managers to act as central contacts and take responsibility during emergencies and crises.

Deutsche Börse Group is engaged in a continuous exchange with internal and external stakeholders on sustainability, climate action and sustainable finance. Deutsche Börse together with the Green and Sustainable Finance Cluster Germany, seeks to drive the sustainable development and associated transformation process in the financial sector, also in respect of sustainable climate finance. The Group is also an active member of a range of climate-related business initiatives. E.g. In August 2009, it joined the UN Global Compact, which focuses on the protection of the environment, among other things. Products and services risks and opportunities relating to climate change are prioritised with respect to the magnitude of impact and the Group’s ability to operationalise solutions into a business strategy. Deutsche Börse offers in particular a wide range of sustainability indices that investors can use as the basis for sustainable investment.

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes

Company- specific description

Deutsche Börse Group holds a majority shareholding in European Energy Exchange AG (EEX), Leipzig, Germany. The product and service offerings of EEX and its subsidiaries focus on energy and energy related markets (e.g. power, gas, emission allowances). There has been a trend towards market integration of renewable energy both at the European and at the national level, including tenders for Renewables since 2017. This contributes to the efficient functioning of markets, including those operated by EEX. A fundamental decision was made in Germany in 2015 to further develop energy markets under the energy-only-market model. Would this trend unexpectedly be reversed, this would have consequences for EEX as it could reduce trading in the power market, for instance through measures promoting renewables support with non-market mechanism through the redesign of bidding zones in Europe, on top of the already planned split between Germany/Austria, or through increased insecurity of the policy framework. This reduction in trading would harm the market and EEX. Against the background of the European policy targets for becoming more energy efficient, increasing renewable energies and reducing CO2 emissions as well as the German “Energiewende” particularly the national implementation of the Clean Energy Package will be discussed in 2019 and 2020. Also the pricing of CO2-emissions via the ETS or taxes and the scope of the ETS are being discussed. These regulatory actions can be understood as mitigation steps of climate change. The regulatory outcome of all these debates directly impact EEX Group’s core activities, including clearing...
and settlement of all transactions. In a worst case scenario liberalisation of energy markets is reversed and the ETS weakened, hence the need for an exchange drastically reduced jeopardising the role of the organisation to provide market-based price building mechanisms. In a best case scenario markets are strengthened by using both competition and market mechanisms and the potential of the European internal energy market to make the implementation of the energy transition efficient from a macroeconomic perspective.

**Potential financial impact figure – minimum (currency)**
8000000

**Potential financial impact figure – maximum (currency)**
25000000

**Explanation of financial impact figure**
While regulatory changes will highly impact EEX which had annual net revenue of €267.65 million in 2018, the relative impact from regulatory changes related to the energy turnaround on Deutsche Börse Group with annual net revenues of €2,462 million in 2017 would only be low. Nevertheless EEX is considered a strategic investment with important growth potential for the future. Depending on the nature of the regulation, several areas of impact are possible. The spot market for power contributed 27% to the revenue of EEX in 2018. The power derivatives market was at 29%, the natural gas markets at 17% and the environmental products at 3%. We estimate a potential financial impact of approximate 8,000,000 m EUR - 25,000,000 m EUR, derived from a reduction of derivative volume. This estimate is based on professional judgment by our subject matter experts within the business.

**Management method**
All political and regulatory opportunities at EEX are closely monitored by the relevant department at both EEX and Deutsche Börse Group. The main measures to benefit from opportunities regulatory changes are to carefully plan for a new market design and products as well as develop the company’s strategy under consideration of these aspects. EEX advocates market-based mechanisms and consults with regulatory bodies to achieve the energy transition and strengthen the ETS. As such EEX provides concrete parameters, which could achieve market oriented solutions. In addition, EEX continuously develops new products and service offerings to support the energy turnaround such as hedging of Green Power Purchase Agreements. Existing offerings are adapted to required changes. Moreover, EEX is continuously trying to expand its market reach by extending its customer base in new markets and new world regions. Since these activities relate to the core of EEX’s activities the entire organisation is involved to sustain and expand the competitive position of the organisation. More specifically, a team of 7 FTEs is involved with political and regulatory affairs and a team of 16 FTEs is involved with business development. Roughly 1 FTE is dedicated to the management of this risk in a broader sense, accounting for 80,000 EUR cost of management.

Are you able to provide a potential financial impact figure?
Yes, a single figure estimate

**Potential financial impact figure (currency)**
10000000

**Potential financial impact figure – minimum (currency)**
<Not Applicable>
Potential financial impact figure – maximum (currency)
35000

Explanation of financial impact figure
Damage to technical/electronical equipment due to water inflow (prior to insurance recovery) in company’s locations in (Western) Europe. The financial impact is mainly driven by replacement costs of damaged own equipment and cost for renovation. Assumed maximum loss of EUR 35 m represents the insured values of the location which is primarily faces the respective risk.

Management method
• Defined and regular tested BCM-processes according to the ‘Business Continuity Management Policy’ of Deutsche Börse Group. • Dispersed operations, shift work and business transfer capabilities between different locations aim to ensure business continuity for vital functions, in case of staff unavailability in one location. • According to building laws dimensions of drain piping for surface water etc. are chosen in accordance to century flooding. • In principle, locations are in non flood areas - The Group has introduced and tested a management process for emergencies and crises that enables it to respond quickly and in a coordinated manner. All business segments have appointed emergency managers to act as central contacts and take responsibility during emergencies and crises. The related annual cost of management in relation to the risk damage to technical/electronical equipment due to water inflow (prior to insurance recovery) in company’s locations in (Western) Europe are 35,000 EUR which are the aggregated personnel costs of individual corporate centers (e.g. facility management, risk management) and comprises all incidental costs that are related to the risk assessment und planning of the business continuity plan.

Cost of management
35000

Comment
The related cost of management in relation to the risk damage to technical/electronical equipment due to water inflow (prior to insurance recovery) in company’s locations in (Western) Europe are assessed at 35,000 EUR which are the aggregated personnel costs of individual corporate centers (e.g. facility management, risk management) and comprises all incidental costs that are related to the risk assessment und planning of the business continuity plan.

Are you able to provide a potential financial impact figure?
Yes, an estimated range

Potential financial impact figure (currency)
35000

Potential financial impact figure – minimum (currency)
50000

Potential financial impact figure – maximum (currency)
3000000

Explanation of financial impact figure
The scenario assumes damage to the office in Singapore following a natural disaster such as a typhoon or an earthquake. Assuming there would be a natural disaster of lower intensity which would not affect the entire floor, significant damage to the building is estimated as rather unlikely. In this case only some minor costs would be expected i.e. repainting the rooms and the purchase of some desks. Therefore potential loss due to damage of office equipment is assessed to be up to EUR 50k. Assuming there would be a natural disaster with a larger intensity, causing a serious damage to the entire building. In this case the building would require a larger repair intervention and the majority of the furniture and hardware device might have to be replaced being partially or completely damaged. Considering acquisition value of furniture, telecommunication and office equipment: - Minimum severity: small damage up to EUR 50k - Maximum severity: app. EUR 3.0m --> office not longer usable

Management method
Business would be transferred to other DBG locations applying the BCM (business continuity management) plans, i.e., business transfers due to workspace unavailability. We assess our facilities ability to operate, staff access, safety and wellbeing and insurance premium impacts on both a short and long-term basis. The risk of damage to technical/electronic equipment and further owned facilities due to typhoon (earthquake) in Singapore (as the main DBG location in Asia) could adversely affect Deutsche Börse’s business continuity and technological infrastructure. As a result, Deutsche Börse Group has set up a system of emergency and disaster plans covering the entire Group (business continuity management, BCM). This covers all processes designed to ensure continuity of operations in the event of a crisis and significantly reduces availability risk. The Group has introduced and tested a management process for emergencies and crises that enables it to respond quickly and in a coordinated manner. All business segments have appointed emergency managers to act as central contacts and take responsibility during emergencies and crises. The related annual cost of management in relation to this risk are 20,000 EUR which are the aggregated personnel costs of individual corporate centers (e.g. facility management, risk management) and comprises all incidental costs that are related to the risk assessment und planning of the business continuity plan for this scenario.

Cost of management
20000
C2.4

(C2.4) Have you identified any climate-related opportunities with the potential to have a substantive financial or strategic impact on your business?

Yes

C2.4a

(C2.4a) Provide details of opportunities identified with the potential to have a substantive financial or strategic impact on your business.

**Opportunity type**
- Products and services

**Primary climate-related opportunity driver**
- Development of new products or services through R&D and innovation

**Type of financial impact**
- Increased revenue through new solutions to adaptation needs (e.g., insurance risk transfer products and services)

**Company-specific description**
Deutsche Börse Group holds a majority shareholding in European Energy Exchange AG (EEX), Leipzig, Germany. The product and service offerings of EEX and its subsidiaries focus on energy and energy related markets (e.g., power, gas, emission allowances). By providing liquid, secure and transparent markets, EEX plays an important role in improving the efficient functioning of these markets that are directly linked to questions of climate change. EEX can benefit extensively from the active role it is taking in supporting the further development of Germany’s and Europe’s electricity market in its transition to a higher share of renewable energy. More renewables mean that more flexibility is required of the market, which EEX Group can provide by reducing the lead time for trading on the intraday market. Also, new hedging instruments are required which EEX can provide through its Wind Power Future and providing long-term hedging for Green Power Purchase Agreements. The trend towards the need for specific product for renewables will continue, imposing new demands and creating more opportunities for the market. Against the background of the European policy targets for becoming more energy efficient, increasing renewable energies and reducing CO2 emissions as well as the German “Energiewende” particularly the national implementation of the Clean Energy Package will be discussed in 2019 and 2020. Also the pricing of CO2-emissions via the ETS or taxes and the scope of the ETS are being discussed. These regulatory actions can be understood as mitigation steps of climate change. The regulatory outcome of all these debates directly impact EEX Group’s core activities, including clearing and settlement of all transactions. In a worst case scenario liberalisation of energy markets is reversed and the ETS weakened, hence the need for an exchange drastically reduced jeopardising the role of the organisation to provide market-based price building mechanisms. In a best case scenario markets are strengthened by using both competition and market mechanisms and the potential of the European internal energy market to make the implementation of the energy transition efficient from a macroeconomic perspective.

**Time horizon**
- Medium-term

**Likelihood**
- Likely

**Magnitude of impact**
- High

**Are you able to provide a potential financial impact figure?**
- Yes, an estimated range

**Potential financial impact figure (currency)**
- Not Applicable

**Potential financial impact figure – minimum (currency)**
- 1000000

**Potential financial impact figure – maximum (currency)**
- 10000000

**Explanation of financial impact figure**
Green power is an inseparable part of the power spot and derivatives trading, which is why advancing market integration of renewable energy not only affects the volume of clearly differentiated environmental products of EEX (3% of 2018’s revenue) but also the other business areas, especially power spot and derivatives trading which together amount to 56% of 2018 revenues. Renewable Energy will play an even more important role over the years to come providing business opportunities for EEX Group. Based on expert assessment and the experience with existing environmental products this could lead to a potential financial impact of 1,000,000– 10,000,000 EUR.

**Strategy to realize opportunity**
The political and regulatory developments in the energy markets are monitored by the relevant department at both EEX and Deutsche Börse Group. This is conducted at EEX by means of monitoring, membership in all relevant associations, constant contact with relevant political and regulatory stakeholders, attendance at key political events, and participation in consultations and providing advice to policy makers. To actively benefit from new developments and manage them EEX advocates market-based mechanisms and consults with regulatory bodies and positions itself as a supporter of liberalised markets. Regulatory changes and other market parameters are continuously evaluated and considered in the overall strategy and future development of EEX. This is the responsibility of the Management Board and the Supervisory Board. Renewable energies will continue to gain importance with the EU targets for Renewables by 2030. Since these activities relate to the core of EEX’s activities the

Company-specific description
EEX Group has been a driver in integrating European energy markets over the past two decades. Market coupling, where EEX-Group member EPEX Spot is a key player, and governance are considered as a prerequisite for efficient energy markets is achieving a European energy market which would allow amongst others for efficient integration of energy from renewable sources. This includes the grid expansion and security of supply, which should be approached from a European perspective. Large European market areas, in particular, constitute an essential precondition for the market and system integration of renewable energies since they permit a large-scale balance between generation and consumption. National “energy self-sufficiency”, on the other hand, is inefficient and not mandatory for the security of supply. On this background EEX Group has experienced – organic and inorganic - growth over the last years, and ongoing European integration of electricity markets provide for further growth opportunities. It is EEX’s goal to continuously grow and strengthen its leadership position in Europe. Its goal is to continue on the same ambitious growth path as over the few years. The opportunity related to efficient integration of energy from renewable sources has an impact on EEX because green power is a steadily growing part of the power spot and derivatives trading, it not only affects the volume of clearly differentiated environmental products of EEX (3% of 2018’s revenue) but also the other business areas, especially power spot and derivatives trading which together amount to 56% of 2018 revenues.

Explanation of financial impact figure
It is EEX’s goal to continuously grow and strengthen its leadership position in Europe. Its goal is to continue on the same ambitious growth path as over the few years. The opportunity related to efficient integration of energy from renewable sources has an impact on EEX because green power is a steadily growing part of the power spot and derivatives trading, it not only affects the volume of clearly differentiated environmental products of EEX (3% of 2018’s revenue) but also the other business areas, especially power spot and derivatives trading which together amount to 56% of 2018 revenues. The opportunity related to an integration of European electricity markets and large bidding zones could have a financial impact between 100,000 – 5,000,000 EUR. This estimate is based on professional judgment by our subject matter experts within the business.

Strategy to realize opportunity
The political and regulatory developments in the energy markets are closely monitored by the relevant department at both EEX and Deutsche Börse Group. This is conducted by remote monitoring, membership in all relevant associations, constant contact with relevant political and regulatory stakeholders, attendance at key political events, and participation in consultations and providing advice to policy makers. To actively benefit from new developments and manage them EEX advocates market-based mechanisms and consults with regulatory bodies and positions itself as a supporter of liberalised markets. As such EEX provides concrete parameters, which could achieve market oriented solution. Further EEX is continuously trying to expand its market reach by extending its customer base in new markets and product offering. All relevant regulatory changes and other market parameters are continuously evaluated and considered in the overall strategy and future development of EEX. Diversification into new market areas and regions is a key element of EEX’s strategy. A team of 7 FTEs is involved with political and regulatory affairs and a team of 16 FTEs is involved with business development. Related cost to realize opportunity are 100,000 EUR which are the related aggregated personnel costs of the two individual corporate centers (political and regulatory affairs ) and comprises all incidental costs that are related to the opportunity assessment and planning.

<thead>
<tr>
<th>Impact</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Products and services</td>
<td>Impacted Deutsche Börse has identified product opportunities that integrate climate-related considerations. For example opportunities driven by structural changes in the sector made STOXX extend the range of indices to offer opportunities to customers managing their related risks. Similarly, EEX developed new products such as energy transition products and hedging opportunities for Green Power Purchase Agreements are developed as a result of the decarbonisation in Europe. We consider the magnitude of these opportunities and associated impacts to be medium-high.</td>
</tr>
<tr>
<td>Supply chain and/or value chain</td>
<td>Impacted A process-based materiality analysis is a key element of Deutsche Börse Group’s sustainability strategy. In particular, this means evaluating and analysing the needs and expectations of relevant internal and external stakeholders on an ongoing basis. The process serves to determine topics of particular importance to the company’s business activities or which have a significant impact on them. This, in turn, enables the Group to identify the opportunities and risks of its core business activities at an early stage and to translate them into concrete areas of entrepreneurial activity. In the 2018 reporting year, the process of identifying key areas for action was developed into a quantitative procedure in order to raise transparency. For the first time, all relevant stakeholder groups were surveyed within one year. This made both concrete comparisons as well as a holistic mapping of Deutsche Börse Group’s opportunity and risk profile in terms of non-financial aspects possible. The aim was to increase the quality and comparability of the data and thereby strengthen the results’ significance. Furthermore, We engage with our suppliers to understand their approach to ESG factors, including their environmental practices. With the help of this information we are able to inform and prioritise our supply chain selection, to identify potential risk and opportunities and to assess our procurement impacts on a broader basis. We focus on strategic and high value suppliers as our main priority, due to the scope and scale of their environmental impacts and the level of engagement we have with them. We consider the magnitude of this risk and associated impacts to be low.</td>
</tr>
<tr>
<td>Adaptation and mitigation activities</td>
<td>Impacted As awareness of the challenges of climate change has grown, greenhouse gas emissions and the careful handling of resources have become the focus of our environmental management system. Deutsche Börse Group has also made environmental issues an integral part of its sustainability activities. Deutsche Börse Group is adopting a holistic approach of resource-saving business ecology. Within our Group-wide initiatives, we focus on avoiding or reducing greenhouse gas emissions. Although Deutsche Börse Group does not engage in manufacturing activities, we have set ourselves the goal of keeping the per capita carbon footprint at a constant, low level in order to contribute to climate change mitigation. Within our Group-wide initiatives, we focus on reducing greenhouse gas emissions, water and paper consumption as well as waste to minimise our ecological footprint. These initiatives include: - Using shuttle buses between the locations Eschborn and Luxembourg reduced carbon emissions by 163 metric tons in 2018. - Sending letters and parcels at the Frankfurt/Eschborn site and parcels at the Luxembourg site via the “Go Green” initiative of Deutsche Post and DHL led to carbon emission reductions of 9 metric tons in 2018. - Offering job tickets for local public transport to staff in Frankfurt/Eschborn saved 776 metric tons in carbon emissions in 2018. - Purchasing sustainably generated hydroelectricity to run Group-wide servers at the EQUINIX data centre in Frankfurt/Bergen-Enkheim reduced carbon emissions by 2,703 metric tons in 2018. We consider the magnitude of these opportunities and associated impacts to be medium-high.</td>
</tr>
<tr>
<td>Investment in R&amp;D</td>
<td>Impacted The Group has invested in R&amp;D in its index business area, to develop methodologies supporting new climate related indexes. Due to the structural changes in the sector we are continuously monitoring in close combination with our user base the development of new indices. We consider the magnitude of these opportunities and associated impacts to be medium-high.</td>
</tr>
<tr>
<td>Operations</td>
<td>Impacted Introducing new offerings for our customers has operational impact such as the computation and maintenance of this offering. As awareness of the challenges of climate change has grown, greenhouse gas emissions and the careful handling of resources have become the focus of our environmental management system. Deutsche Börse Group has also made environmental issues an integral part of its sustainability activities. Deutsche Börse Group is adopting a holistic approach of resource-saving business ecology. C3. Business Strategy

C3.1

(C3.1) Are climate-related issues integrated into your business strategy?

Yes
(C3.1a) Does your organization use climate-related scenario analysis to inform your business strategy?
Yes, qualitative and quantitative

(C3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.

Deutsche Börse Group attaches great importance to climate change within the overall operational strategy. Deutsche Börse is convinced that climate change will have a material impact on the economy as a whole and thus also on Deutsche Börse Group. Sustainability aspects - which include climate-related issues - are implemented alongside the whole value chain of Deutsche Börse Group, depending on the business area or business model affected. It is our constant ambition to understand the relationship between the environment and society, between climate change and the financial market and thus also the possibilities of shaping these relationships on a sustained basis. Environmental problems are also always societal problems. As part of society, as an organiser of international capital markets and as a listed company, the Group seeks not only to limit the impact of climate change on itself but also to provide support when it comes to tackling the problems and challenges on the way to sustainable finance and a sustainable global economy.

The underlying identification and management of the climate-related issues result from the overall business strategy. An oversight is assured by the Group Sustainability Board. The Board consists of 12 members, two from each area of Executive Board responsibility and the Head of Group Sustainability. In 2018 the Board was chaired by the COO. The Board's tasks are to further develop the Group-wide sustainability strategy along the entire value chain and to advise the Executive Board on sustainability issues. In addition to the Group Sustainability Board, the Group-wide assessment and management of risks through the organizational structure and reporting channels of risk management is another key element in identifying and disclosing ESG risks in Deutsche Börse Group's business model and corporate strategy. It continuously analyses how climate risks manifest, how they impact on financial performance, which products and services are affected along the value chain, and what core business-based strategic steps can be taken to minimize risks and opportunities. The measures taken include the (further) development of financial products and services, a steadily improving decision-making process, the review of processes, the setting and achievement of targets, an improvement in the ecological balance and a continuous dialogue with internal and external stakeholders.

Deutsche Börse Group has made substantial business decisions in 2018 influenced by climate change aspects:

- It has been actively supporting the TCFD since November 2017. Based on the high importance of climate change within the overall strategy of the Group Theodor Weimer, Chief Executive Officer of Deutsche Börse AG, commissioned the GSB with the development and publication of a climate strategy for Deutsche Börse Group. And so the Climate Strategy Task Force was established in the second half of 2018. It consists of members of the GSB and identified and discussed climate-related opportunities and risks along the value chain. Consequently, a Group-wide climate strategy was developed throughout 2018, which is geared to the four core elements of the TCFD recommendations. - It founded the Green and Sustainable Finance Cluster Germany (GSFCG) in cooperation with the Hesse Ministry of Finance. The initiative seeks to make efficient use of the expertise in the area of sustainable finance and to implement specific courses of action to ensure the viability of financial market structures. Thus Deutsche Börse together with the Green and Sustainable Finance Cluster Germany seeks to drive the sustainable development and associated transformation process in the financial sector, also in respect of sustainable climate finance.

- Against this background, in 2018 the Cluster established a TCFD think tank for method development in the context of climate reporting in the financial industry. As important the TCFD recommendations are to financial institutions, so abstract and theoretical they are in the publication of the Task Force. The think tank of the cluster aimed to contribute to the bridging the gap between theory and practice. In four workshops, methods were developed to implement climate reporting along the entire value creation process. The participants came among other things from the asset management as well as CSR and risk departments of the members and supporters of the Cluster. The workshops not only served as a sort of preparation to implement the TCFD recommendations, but also encouraged the exchange between the participants. Consequently, the think tank strengthened the Cluster's position as competence center on topics related to sustainable finance and supports the goal of making more efficient use of financial market expertise in the area of sustainable finance.

- STOXX's offering of sustainability indices is diversified and includes environmental, social and governance- (ESG), climate change- and carbon emissions-related products. The latest extension to STOXX suite of ESG-related indices is the launch of the STOXX® Europe 600 ESG-X index in November 2018. This index is based on the STOXX Europe 600 index, one of Europe's key benchmarks, with standardised ESG exclusion screens applied. The screens are based on the responsible policies of leading asset owners and aim to reduce reputational and idiosyncratic risks. STOXX specifically exclude companies that Sustainalytics considers to be non-compliant with the UN Global Compact Principles, are involved in controversial weapons, are tobacco producers and that either derive revenues from thermal coal extraction or exploration or have power generation capacity that utilises thermal coal.

As part of this process of transforming society as a whole Deutsche Börse Group is engaged in a continuous exchange with internal and external stakeholders on sustainability, climate action and sustainable finance. It sees this not only as part of its strategic approach but also as managing climate-related opportunities and risks. The Group is also an active member of a range of climate-related business initiatives. In August 2009, it joined the UN Global Compact, which focuses on the protection of the environment, among other things. The Company is also a member of the Sustainable Working Group of the World Federation of Exchanges (WFE SWG) and the Sustainable Stock Exchange Initiative (SEE) and the Principles for Responsible Investment (PRI). Moreover, we actively monitor climate change consequences that might affect our operations, including direct impacts such as flooding and extreme weather as well as indirect impacts e.g. increased average temperatures which could increase in cap and trade schemes leading to higher operating costs for our business and that of quoted companies.
(C4.1) Did you have an emissions target that was active in the reporting year?

No target

(C4.1c) Explain why you do not have emissions target and forecast how your emissions will change over the next five years.

<table>
<thead>
<tr>
<th>Primary reason</th>
<th>Five-year forecast</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Important but not an immediate business priority</td>
<td>Even though environmental issues (see the results of our materiality analysis in 2018) are not an material field of action, we nonetheless seek to keep the per capita carbon footprint at a consistently low level. Moreover, Deutsche Börse Group has outlined its environmental policies in its code of business conduct. Indicators for its environmental sustainability performance are available on its website <a href="https://www.deutsche-boerse.com/dbg-en/sustainability/reporting/benchmark-indicators">https://www.deutsche-boerse.com/dbg-en/sustainability/reporting/benchmark-indicators</a>. Furthermore, environmental protection issues are becoming increasingly relevant for the design of individual products or services. Deutsche Börse Group developed a climate strategy aligned with the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD): <a href="https://deutsche-boerse.com/resource/ibid/v1540134f1beee181a19292d7a70a33928167c9d00103a/DBG-climate-strategy_en.pdf">https://deutsche-boerse.com/resource/ibid/v1540134f1beee181a19292d7a70a33928167c9d00103a/DBG-climate-strategy_en.pdf</a>. It's Deutsche Börse's goal to set an example, to minimise its own ecological footprint and to increase transparency about it. For 2018 our emissions intensity figure per unit of currency total revenue was 0.0000023657. In the context of the development of our climate strategy in 2018, Deutsche Börse Group also discussed the further development of its own ecological footprint and is currently eaming to set its business carbon neutral. Consequently, we assume a ecological footprint of zero for the next five reporting years and therefore the prediction is a decrease of our emissions intensity figure per unit of currency total revenue from 0.0000023657 to 0 in 2019 and the following years.</td>
<td>As a service provider with a focus on providing market infrastructure services, Deutsche Börse Group engages in relatively little environmentally sensitive activity from a corporate environmental perspective. Nonetheless, as awareness of the challenges of climate change has grown, greenhouse gas emissions and the careful handling of resources have become the focus of environmental commitment – both on the political and legislative level and within companies. Deutsche Börse Group has also made environmental issues an integral part of its sustainability activities</td>

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products or do they enable a third party to avoid GHG emissions?

Yes

(C4.5a) Provide details of your products and/or services that you classify as low-carbon products or that enable a third party to avoid GHG emissions.

**Description of product/Group of products**
The STOXX Low Carbon and Climate Change index families are designed to enable investors to decarbonise their portfolios, i.e. limit the exposure of their portfolios to climate-related risks, such as stricter regulations and physical damage, while participating in the low-carbon economic growth. To cater to different approaches, STOXX developed two fully tailored solutions based on broad index universes. The STOXX Low Carbon contains four sub-families offering varying degrees of carbon exposure. The comprehensive STOXX Low Carbon index family is derived from STOXX’s broad and liquid STOXX Global 1800 Index and its regional subsets (STOXX Europe 600, STOXX Asia/Pacific 600, STOXX North America 600). These fully transparent and rules-based solutions include: - STOXX Low Carbon Indices - STOXX Industry Leader Low Carbon Indices - STOXX Low Carbon Footprint Indices - The STOXX Climate Change index.

Are these low-carbon product(s) or do they enable avoided emissions?

Low-carbon product

Taxonomy, project or methodology used to classify product(s) as low-carbon or to calculate avoided emissions

Other, please specify (STOXX uses CDP and ISS ESG as reliable and professional data sources for the estimated and reported data used to calculate all STOXX Low Carbon Indices.)

STOXX uses CDP and ISS-Ethix Climate Solutions as reliable and professional data sources for the estimated and reported data used to calculate all STOXX Low Carbon Indices. Data considered comprise Scope 1 (all direct greenhouse gas emissions) and Scope 2 (indirect greenhouse gas emissions from consumption of purchased electricity, heat or steam) emissions. The STOXX Climate Change indices incorporates CDP climate change scoring methodology which assesses companies based on their progress in the transition towards a low carbon economy. All indices are price weighted with a weight factor based on the free-float market cap multiplied by the corresponding Z-score carbon intensity factor of each constituent. Components with lower carbon intensities are overweighed, while those with higher carbon emission are underweighted. Additionally, the STOXX Industry Leaders Low Carbon Indices are also calculated in an equal weight version.

% revenue from low carbon product(s) in the reporting year

(C5. Emissions methodology)
(C5.1) Provide your base year and base year emissions (Scopes 1 and 2).

Scope 1

Base year start
January 1 2016

Base year end
December 31 2016

Base year emissions (metric tons CO2e)
2,878

Comment
It is difficult to produce a Group-wide consolidation of environmental data and a detailed breakdown at this time due to capacity-related and technical reasons. This can be explained primarily with regard to the materiality assessment, which suggests other priorities with a view to the value chain of a financial services provider. Nevertheless, we aim to further increase our transparency and informational content. To this end, in 2016 we expanded the internal capture of environmental data to include a number of additional locations. For quality assurance reasons, these new data will only be included in our external reporting in the 2018 reporting period, following careful consolidation.

Scope 2 (location-based)

Base year start
January 1 2016

Base year end
December 31 2016

Base year emissions (metric tons CO2e)
21,968

Comment
Where available market-based data is used. Only for a few facilities, we are dependent on location-based data. Therefore, a split of data sources is not made. Nonetheless, we are continuously working on an improvement of data quality and consistency.

Scope 2 (market-based)

Base year start
January 1 2016

Base year end
December 31 2016

Base year emissions (metric tons CO2e)
1,754

Comment
Where available market-based data is used. Only for a few facilities, we are dependent on location-based data. Therefore, a split of data sources is not made. Nonetheless, we are continuously working on an improvement of data quality and consistency.

Scope 2, market-based (if applicable)
2230

Start date
January 1 2018

End date
December 31 2018

Comment

C6.4
(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

No

C6.5
(C6.5) Account for your organization's Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

Evaluation status
Not relevant, calculated

Metric tonnes CO2e
73

Emissions calculation methodology
Recycled paper is accounted for at an emissions factor of 0.99 kg CO2 / kg paper.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
Deutsche Börse Group is a service provider. Its core activities concentrate on designing, developing and operating software systems and related services. CO2 emissions from employment of external staff as purchase of services is included in CO2 emissions from operations i.e. Scope 2 emissions. Nevertheless, office supplies are of course used. CO2 emissions from the production of 73 tonnes of recycled paper (Deutsche Börse Group's paper consumption 2018) amount to 73 tonnes.
Capital goods

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Explanation
Discussions with the purchasing department are still taking place to evaluate emissions from capital goods mainly the purchase of computers and servers. Our evaluation is not complete yet.

Fuel-and-energy-related activities (not included in Scope 1 or 2)

Evaluation status
Not relevant, calculated

Metric tonnes CO2e
2571

Emissions calculation methodology
Percentages of emissions values for T & D losses electric power; CO2 emissions from electricity and heat production; electricity production from natural gas sources; CO2 emissions from transport have been taken into account

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
CO2 emissions from electric power T & D losses = 61 t. CO2 upstream emissions from electricity and heat production = 649t. CO2 upstream emissions from electricity production from natural gas sources = 464t. CO2 emissions from transport of energy = 1397t.

Upstream transportation and distribution

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Explanation
As service provider of financial markets services upstream transportation and distribution are not relevant for the Group's core business activities.

Waste generated in operations

Evaluation status
Not relevant, explanation provided

Metric tonnes CO2e
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Explanation
The main waste generated from services provided by Deutsche Börse Group is waste from office activities - mainly paper, organic waste from the company's canteens and other waste. With 151 tonnes of recycled waste, 390 tonnes of composted waste, 328 tonnes of non-hazardous and 23 tonnes of hazardous waste. A total of 164t of waste at the other international locations is unclassified.

Business travel

Evaluation status
Relevant, calculated

Metric tonnes CO2e
2436

Emissions calculation methodology
Includes: - total flight km in 2018 weighted with the DEFRA factor - shuttle bus between Frankfurt/Eschborn and Luxembourg (average 525 gr. CO2 per km)

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Explanation
The total number of flight kilometres in 2018 was 21.4 million representing some 2,436 tonnes of CO2 emissions declining by 41.91% compared to CO2 emissions 2017. The Frankfurt/Eschborn-Luxembourg shuttle bus represents in terms of km (0.184,4 million km) with an emissions factor of 525 gr. CO2 per km CO2 emissions of 96,8 tonnes in 2018.
Employee commuting

Evaluation status
Relevant, calculated

Metric tonnes CO2e
1481

Emissions calculation methodology
Includes: - cars leased by employees based on total km used with an average of 138 gr. CO2 per km)

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Explanation
Due to privacy laws in Germany Deutsche Börse cannot require its employees to provide information on their commuting patterns. However, Deutsche Börse evaluates the total number of km for cars leased by employees of employees (10.31 million km in 2018). In 2018, the number of gr. CO2 per km decreased slightly from 139 gr. CO2 per km to 138 gr. CO2 per km and represents 1481 tonnes of CO2 p.a.

C6.7

(C6.7) Are carbon dioxide emissions from biologically sequestered carbon relevant to your organization?
No

C6.10
Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.0000023657

Metric numerator (Gross global combined Scope 1 and 2 emissions)
6576

Metric denominator
unit total revenue

Metric denominator: Unit total
2779200000

Scope 2 figure used
Market-based

% change from previous year
14.18

Direction of change
Decreased

Reason for change
The emissions intensity decreased because total revenue experienced growth of 13% and Scope 1 and 2 greenhouse gas emissions decreased by 14%.

Intensity figure
1.23

Metric numerator (Gross global combined Scope 1 and 2 emissions)
6576

Metric denominator
full time equivalent (FTE) employee

Metric denominator: Unit total
5340

Scope 2 figure used
Market-based

% change from previous year
24.4

Direction of change
Decreased

Reason for change
While the average annual number of FTEs increased, Scope 1 & 2 emissions decreased by 14% during the same time.

Intensity figure
0.85

Metric numerator (Gross global combined Scope 1 and 2 emissions)
6576

Metric denominator
Other, please specify (Work places)

Metric denominator: Unit total
7709

Scope 2 figure used
Market-based

% change from previous year
4.71

Direction of change
Decreased

Reason for change
The total number of people working for Deutsche Börse Group include a portion of external staff, which are not included in the FTE numbers above. We hence decided to look at the number of workplaces we provide across the company and put this figure into relation with our CO2 emissions. From previous years figures the total number of workplaces provided by Deutsche Börse at its premises decreased by 4.71%.

C7. Emissions breakdowns

C7.1

Does your organization break down its Scope 1 emissions by greenhouse gas type?

No

% total procurement spend (direct and indirect)
97

% Scope 3 emissions as reported in C6.5
100

Rationale for the coverage of your engagement
We engage with our suppliers to understand their approach to ESG factors, including their environmental practices. With the help of this information we are able to inform and prioritise our supply chain selection, and to assess our procurement impacts on a broader basis. Deutsche Börse Group expects its supplier to be conscious of their social and ecological responsibility and to be committed to the principles of sustainability. Therefore it set up a Code if Conduct for Suppliers, that any new supplier must sign. This Code of Conduct defines the principles and standards required of DBG’s suppliers of products and services with regard to their responsibilities to people and the environment. One of the stated aims of DBG is to work with its suppliers to implement on an ongoing basis the principles required by its Code of Conduct. DBG expects that its suppliers actively endeavour to observe the contents of the Code of Conduct below. Suppliers are also expected to urge their own suppliers to adhere to the contents of the Code of Conduct and to observe the principle of non-discrimination in their choice of suppliers and in their dealings with suppliers throughout the supply chain.

Impact of engagement, including measures of success
As a rule, any new suppliers must sign Deutsche Börse Group’s code of conduct for suppliers. In exceptional cases they may have a self-commitment in place that is at least equivalent. As a measure of success, we track the number of suppliers that have signed the code of conduct. The number of suppliers having signed the code of conduct for suppliers keeps rising steadily. Impact of engagement: DBG expects the supplier to seek to use and optimise environmentally-friendly methods in its operational processes and technologies. Moreover, DBG expects the supplier to observe national legal standards and international environmental protection standards, as well as to minimise its environmental burden and continuously improve its environmental protection standards.

Comment
Code of Conduct is mandatory.

C12.1b

Please explain the rationale for selecting this group of customers and scope of engagement

- STOXX extensively engages with customers around the topic of Sustainability as a whole. STOXX actively works together with customers to tailor solutions that address investment challenges around the topics of Low Carbon, Climate Change, ESG or even a combination thereof. Solutions range from lowering the carbon footprint of portfolios, climate change focused portfolios that consider forward looking indicators which allow investors to identify companies that are evolving their strategies to adapt to a 2 degree economy and that are following Science Based Targets, to solutions which target specific KPI’s within the ESG dataset to capture granular sustainability themes (e.g. Renewable Energy KPI’s). Furthermore, the “inclusionary” methodology (i.e. not deliberately excluding high emitters purely based on emissions) that STOXX follows in their Low Carbon family of indices, allows investors to engage with higher emitters and to force strategic changes through shareholder resolutions. An “exclusionary” methodology does not allow investors to enter into engagement with high emitters, since by design they do not have any shareholding and can therefore not challenge high emitters. • Additionally, STOXX provides independent benchmarks which specifically focuses on either Low Carbon, Climate Change or ESG. • STOXX have undertaken a market consultation process whereby a standardized ESG exclusion process has been created to create ESG complaint benchmarks, which now also serves as underlyings for futures listed on Eurex. Furthermore, the EURO STOXX 50 Low Carbon index is now the underlyings of a future listed on Eurex, which is the result of a market consultation process, i.e. engaging with Tier 1 Asset Owners, whereby the benefits of the index is shown, particularly from a carbon footprint reduction perspective. The STOXX Europe Climate Impact index also has a future listed on the index, again as a result of the market consultation process, with the aim at providing a solution which uses forward looking indicators while aligning with TCFD recommendations as well as Science Based Targets, as captured by the CDP scoring methodology. These derivatives were launched after engagement with asset owners that lead to the adoption of the benchmarks, and has now been expanded to include derivative instruments launched on these indices.

Impact of engagement, including measures of success

We run a campaign to increase awareness about the availability of our indices addressing the requirements and challenges. • STOXX extensively engages with customers around the topic of Sustainability as a whole. STOXX actively works together with customers to tailor solutions that address investment challenges around the topics of Low Carbon, Climate Change, ESG or even a combination thereof. Solutions range from lowering the carbon footprint of portfolios, climate change focused portfolios that consider forward looking indicators which allow investors to identify companies that are evolving their strategies to adapt to a 2 degree economy and that are following Science Based Targets, to solutions which target specific KPI’s within the ESG dataset to capture granular sustainability themes (e.g. Renewable Energy KPI’s). • Furthermore, the “inclusionary” methodology (i.e. not deliberately excluding high emitters purely based on emissions) that STOXX follows in their Low Carbon family of indices, allows investors to engage with higher emitters and to force strategic changes through shareholder resolutions. • Additionally, STOXX provides independent benchmarks which specifically focuses on either Low Carbon, Climate Change or ESG. • STOXX have undertaken a market consultation process whereby a standardized ESG exclusion process has been created to create ESG complaint benchmarks, which now also serves as underlyings for futures listed on Eurex. Furthermore, the EURO STOXX 50 Low Carbon index is now the underlyings of a future listed on Eurex, which is the result of a market consultation process, i.e. engaging with Tier 1 Asset Owners, whereby the benefits of the index is shown, particularly from a carbon footprint reduction perspective. The STOXX Europe Climate Impact index also has a future listed on the index, again as a result of the market consultation process, with the aim at providing a solution which uses forward looking indicators while aligning with TCFD recommendations as well as Science Based Targets, as captured by the CDP scoring methodology. These derivatives were launched after engagement with asset owners that lead to the adoption of the benchmarks, and has now been expanded to include derivative instruments launched on these indices.
(C12.1c) Give details of your climate-related engagement strategy with other partners in the value chain.

Deutsche Börse is perfectly positioned to help promoting good practice across the industry and to foster knowledge building and dialogue among their partners. Therefore, Deutsche Börse founded the Green and Sustainable Finance Cluster Germany (GSFCG) in cooperation with the Hesse Ministry of Finance. The initiative seeks to make efficient use of the expertise in the area of sustainable finance and to implement specific courses of action to ensure the viability of financial market structures.

The Cluster offers a continuous platform for dialogue around topics relating to green and sustainable finance that involves all relevant stakeholder groups, ranging from businesses, the public, lawmakers and regulators to scientists and academics. Its central objectives – creating transparency and supporting standardisation within the framework of sustainable financial structures – can only be achieved in close cooperation and open exchange with all parties involved. Against this background, in 2018 the Cluster established a TCFD think tank for method development in the context of climate reporting in the financial industry. As important the TCFD recommendations are to financial institutions, so abstract and theoretical they are in the publication of the Task Force. The think tank of the cluster aimed to contribute to the bridging the gap between theory and practice.

In four workshops, methods were developed to implement climate reporting along the entire value creation process. The participants came among other things from the asset management as well as CSR and risk departments of the members and supporters of the Cluster. The workshops not only served as a sort of preparation to implement the TCFD recommendations, but also encouraged the exchange between the participants. Consequently, the think tank strengthened the Cluster’s position as competence center on topics related to sustainable finance and supports the goal of making more efficient use of financial market expertise in the area of sustainable finance.

Besides the engagement with partners form the financial industry, Deutsche Börse also cooperates with the real economy on climate-related topics. For example, in February 2018 the Head of Sustainability lead a workshop of econsense (for more information on this association please see 12.3 c) on Sustainable Finance where climate related topics were discussed.

STOXX also strategically engages with its partners. STOXX has a collaborative approach when dealing with data providers in our value-chain. STOXX relies on specialist, independent data providers to provide the highest quality data that are used in constructing indices. The collaborative approach allows STOXX to leverage the expertise within the data provider eco-system and contributes to creating robust solutions which utilises the most appropriate data. Our Code of Conduct covers the climate related engagement strategy in the value chain.

STOXX uses in particular CDP data, but also in combination with other ESG datasets, to create both Low Carbon and Climate Index solutions for clients. The STOXX Climate Change Leaders index is constructed on the CDP A list data, while CDP Scores are used for the STOXX Climate Impact and Climate Awareness indices. The EURO STOXX 50 Low Carbon index is now the underlyng of a future listed on Eurex, which is the result of a market consultation process, i.e. engaging with Tier 1 Asset Owners, whereby the benefits of the index is shown, particularly from a carbon footprint reduction perspective. The STOXX Europe Climate Impact index also has a future listed on the index, again as a result of the market consultation process, with the aim at providing a solution which uses forward looking indicators while aligning with TCFD recommendations as well as Science Based Targets, as captured by the CDP scoring methodology. These derivatives were launched after engagement with asset owners that lead to the adoption of the benchmarks, and has now been expanded to include derivative instruments launched on these indices.

C12.3

(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?

- Direct engagement with policy makers
- Trade associations
- Funding research organizations

Trade association
cosense - Forum for Sustainable Development of German Business

Is your position on climate change consistent with theirs?
Mixed
Please explain the trade association's position

EconSense is an association of leading, globally active companies and organisations from the German business world. The initiative focuses on corporate responsibility and the development of ideas for a sustainable economy. The goal is to integrate topics of sustainability in companies' business activities. Sustainability and CSR have become globally guiding principles. In an open dialogue, the members of econSense strive to further advance the implementation of economic, social and ecological objectives, with the awareness that business with strengths in innovation and investment also assumes certain responsibility for the success of sustainable development. At the same time, companies can only discern their corporate social responsibility when supportive and reliable political framework conditions offer them a good environment. Uniting all econSense members is the conviction that sustainable development offers a strategy for companies to increase their long-term competitiveness and, thus, to remain futureproof. The objectives of econSense are: - To pool corporate activities on sustainability topics, such as climate protection and demographic change, and to jointly further develop these projects; - To actively shape the political and social discourse; - To credibly communicate the solution competence of the economy; - To strengthen the open dialogue between political and social groups; - To highlight the possibilities and limitations of corporate responsibility; and - To promote sustainability concepts and CSR in the business community and raise awareness of policymakers for framework conditions that promote innovation and competitiveness. The main topics covered by the association with respect to climate change include: Making Sustainability Measurable (Ratings/ Rankings/ Reporting), Sustainability along the Value Chain, Resource Efficiency, and Managing Climate Protection.

How have you influenced, or are you attempting to influence their position?

Kristina Jeromin, Head of Group Sustainability at Deutsche Börse Group, is member of the steering committee of econSense. Together with the management of the association, the steering committee is responsible for both the strategic alignment of econSense and the collaboration with the economy, politics, society and the media.

Trade association

The Sustainable Stock Exchanges (SSE)

Is your position on climate change consistent with theirs?

Mixed

Please explain the trade association’s position

The Sustainable Stock Exchanges (SSE) initiative is a peer-to-peer learning platform for exploring how exchanges, in collaboration with investors, regulators, and companies, can enhance corporate transparency – and ultimately performance – on ESG (environmental, social and corporate governance) issues and encourage sustainable investment.

How have you influenced, or are you attempting to influence their position?

DBG takes an active role in the work of the SSE in various ways. In respect of the working groups, regular working group calls take places, in which DBG participates. Moreover, DBG supports the SSE in the preparation of reports.

Trade association

UN Global Compact

Is your position on climate change consistent with theirs?

Consistent

Please explain the trade association’s position

The UN Global Compact is an initiative for companies that are committed to aligning their operations and strategies with ten universally accepted principles in the areas of human rights, labour, environment and anti-corruption. It is the broadest and most important network for corporate social responsibility issues.

How have you influenced, or are you attempting to influence their position?

Since July 2009, Deutsche Börse Group has participated in the United Nations Global Compact. As a participant, the company publicly pledges to adhere to the Compact’s ten principles in the areas of human rights, labour, environmental protection, and anti-corruption. Unlike other financial services providers, such as banks or insurance companies, Deutsche Börse Group holds a unique position in the financial markets segment: its business model as well as the products and services it offers set it apart considerably from other financial services providers. As one of the world’s largest stock exchange operators, Deutsche Börse Group organises markets characterised by the integrity, transparency, and security they offer investors, thereby providing the infrastructure which many service providers of the industry use for their products. Deutsche Börse Group endorses the UN’s Universal Declaration of Human Rights. As a member of the UN Global Compact, Deutsche Börse Group is highly committed to implementing the UN Global Compact’s ten principles in the areas of human rights, labour, the environment and anti-corruption throughout the Group when designing our business processes and strategies. In 2017, Deutsche Börse Group developed a range of initiatives in conjunction with the Global Compact’s ten principles: - Deutsche Börse offers updated overview of DAX®-family indexes companies’ sustainability reporting - Transparency – Cooperation with international ESG organizations - In line with our business – a new management body for sustainability - Joining the United Nations Sustainable Stock Exchanges initiative’s ESG Model Guidance Campaign - Supplier Code of Conduct and Supply Chain Assessment - Sustainable index products - Target female quotas adopted - Improving our ecological footprint - Employment Rights - Trainings to prevent bribery, corruption and money laundering - Life & Family initiative.

Trade association

Verein für Umweltmanagement und Nachhaltigkeit in Finanzinstituten e.V. (Society for environmental management and sustainability in financial institutes, VfU)

Is your position on climate change consistent with theirs?

Mixed

Please explain the trade association’s position

The Verein für Umweltmanagement und Nachhaltigkeit in Finanzinstituten e.V. (Society for environmental management and sustainability in financial institutes, VfU) is a network of financial service providers from Germany, Austria, Switzerland and Liechtenstein. The society and its members have been working on the development and implementation of innovative and sustainable solutions for financial service providers with the objective of increasing the contribution of the financial industry towards a sustainable development.

How have you influenced, or are you attempting to influence their position?

Deutsche Börse Group does not only participates in various events, organised by the VfU, especially in symposiums, around the topic of sustainability, but also organizes events alongside with the VfU. Furthermore, DBG ensures their "one voice" approach by binding all initiatives on the Green and Sustainable Cluster Germany. Also, DBG aims to strengthen knowledge transfer within its members.

Trade association

World Federation of Exchanges (WFE)

Is your position on climate change consistent with theirs?

Mixed

Please explain the trade association’s position

Established in 1961, the WFE is the global industry association for exchanges and clearing houses. Headquartered in London, it represents over 200 market infrastructure providers, including standalone CCPs that are not part of exchange groups. The WFE works with standard-setters, policy makers, regulators and government organisations around the world to support and promote the development of fair, transparent, stable and efficient markets. The WFE shares regulatory authorities' goals of ensuring the
Deutsche Börse Group contributes actively in related works streams within the WFE - e.g. DBG was invited to participate in a work stream to create the world's first Sustainability Derivatives Framework.

**Trade association**

**EUROPEX**

Is your position on climate change consistent with theirs?  
Consistent

Please explain the trade association's position  
EUROPEX is a not-for-profit association of European energy exchanges. It represents the interests of 24 exchange-based wholesale electricity, gas and environmental markets and provides a European discussion platform on developments of the European regulatory framework for wholesale energy trading. Activities include:  
- Promoting the role of energy exchanges as a way of increasing competition by creating price transparency and implementing the European single electricity and gas market  
- Supporting the liberalisation of the different European electricity and gas systems  
- Dealing with the issue of international trading, with special emphasis on providing a market solution to the congestion problems  
- Maintaining a dialogue with the European Union authorities and with other European electricity, gas and environmental markets related entities  
- Increasing co-operation between European energy exchanges and to promote free trade  
- Collecting information, preparing reports and providing advice in matters related to the aforementioned objectives  
- Assessing the need for recommendations regarding market information dissemination and market rules especially related to market power abuse  
Through its Environmental Market Working Group, EUROPEX voices its positions on carbon and wider environmental markets policy issues and developments. In its answer to the EU Consultation on revision of the EU Emission Trading System (EU ETS) Directive in March 2015, it stated that it "supports the proposal to bring the EU ETS cap in line with the EU's 2050 long-term ambition and the adjustment of the linear reduction factor to achieve this. The unambiguous commitment to this ambitious reduction path also contributes to decreasing insecurity due to interaction effects with other policies. Of course, these interaction effects with other policies have only to a limited extent been the cause of the current allowance surplus in the ETS, which is mainly a result of economic development. EUROPEX welcomes the discussion on structural reform at the European level. The proposed Market Stability Reserve (MSR) can send a strong political signal and contribute to increasing trust in the EU ETS as a whole. To function efficiently, an emissions market requires scanty to create a price signal in addition to long-term predictability of rules and targets."  

How have you influenced, or are you attempting to influence their position?  
Jean-François Conil-Lacoste, Chairman of the Management Board of EPEX SPOT, and Egbert Laege, CEO of Powernext, both Executive Board members of EEX and CEO of EEX Group companies, are Board Members of EUROPEX. They support the overall strategic positioning and approach of EUROPEX. In addition, EEX staff is an active member of EUROPEX' specialised Environmental Market working group. EEX also contributes at the operative level and has actively supported to the publication of a EUROPEX position paper on principles for the further development of carbon and wider environmental markets and other position papers.

**Trade association**

**IETA (International Emissions Trading Association)**

Is your position on climate change consistent with theirs?  
Consistent

Please explain the trade association's position  
IETA subscribes to the objectives of the UNFCCC and ultimately climate protection; advocates the establishment of effective market-based trading systems for greenhouse gas emissions; and maintaining societal equity and environmental integrity while establishing these systems.

How have you influenced, or are you attempting to influence their position?  
EEX is an active member of IETA, regulatory participating in the EU working group of IETA. IETA is in regular contact with members of the EU Commission, Parliament, Presidency, and individual Member States to voice member opinions on policy developments with respect to climate change.

**C12.3d**

(C12.3d) Do you publicly disclose a list of all research organizations that you fund?  
Yes

**C12.3f**

(C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?  
Deutsche Börse Group has a centralised Group Regulatory Strategy (GRS) area, which is responsible for numerous projects relating to changes in Deutsche Börse Group's political and strategic environment. For matters relating to corporate sustainability or climate change, GRS has a specific and dedicated Group Sustainability Unit in and responds directly to the Chief Executive Office (CEO) Division of Deutsche Börse Group. Sustainability considerations run through the entire political and regulatory work of Deutsche Börse Group. The core responsibility for public affairs related to commodity markets at large is delegated directly to EEX, the groups' commodity exchange. The working methods are identical and closely inter-coordinated. The overall approach is to take on a specific position in close consultation with the management of the business areas of the entire Group. Moreover, Group Regulatory Strategy at Deutsche Börse and EEX support and monitor political processes and regulatory developments. On an ongoing basis, staff also make strategic assessments and prepare briefing documents on regulatory and policy matters for key decision makers of Deutsche Börse Group. The centralised teams guarantee that position papers and other activities such as reports or presentations are developed together and hence are consistent and in line with the strategy of Deutsche Börse Group.
